Int J Biomed Comput, 26 (1990) 285—288
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX

Volume 26 (1990)

Action potential, teaching, simulation, computer, field potential, 211
Acute abdominal pain, decision support, computers, 183
Algorithm, probability, heuristic, approximation, diagnostic program, 29
Alveolar partial pressure of CO, mathematical model, carbon monoxide, CO dissociation curve, blood COHb level, pulmonary capillaries, 135
Anamnesis, diagnosis, expert system, information value, laboratory test, physical examination, 203
Approximation, algorithm, probability, heuristic, diagnostic program, 29
Artificial intelligence, expert system, computer-assisted diagnosis, jaundice diagnosis, medical decision making, 189

Bacteriophage lambda DNA, restriction fragment length polymorphism, restriction endonuclease, mitochondrial DNA, mutation, pBR322 $\varphi \times$ 174cs70, SV40, 39
BASIC program, carcinoma-free probability, carcinogen DMBA, formula of probability, 171
BASIC program, percentile of heart weight, formulas for heart weight predictions, 257
Bile salts, fourier analysis, biliary and pancreatic excretion, ceruletide/secretin, bilirubin, trypsin, 109 Biliary and pancreatic excretion, fourier analysis, ceruletide/secretin, bilirubin, bile salts, trypsin, 109
Bilirubin, fourier analysis, biliary and pancreatic excretion, ceruletide/secretin, bile salts, trypsin, 109
Blood COHb level, mathematical model, carbon monoxide, alveolar partial pressure of CO, CO dissociation curve, pulmonary capillaries, 135
Boundary detection, hybridomas, image analysis, digitization, thresholding, 271
Brain metabolism, correlation matrix, simulation, positron emission tomography, deoxyglucose, 149
Bubbles and nucleation, decompression, phase models, critical phase hypothesis, meter algorithms, varying permeability model, reduced critical tensions, gradients, 237

Carbon monoxide, mathematical model, alveolar partial pressure of CO, CO dissociation curve, blood COHb level, pulmonary capillaries, 135
Carcinogen DMBA, BASIC program, carcinoma-free probability, formula of probability, 171
Carcinoma-free probability, BASIC program, carcinogen DMBA, formula of probability, 171
Ceruletide/secretin, fourier analysis, biliary and pancreatic excretion, bilirubin, bile salts, trypsin, 109
Chondromalacia, cornea modeling system, keratometry, meniscal lesions, photokeratoscopy, radial keratotomy, vibration arthrography, 129
Communication aids, expressive communication, interface design, 53
Computer, medical informatics, information, data base, expert system, technology, 73
Computer, teaching, simulation, action potential, field potential, 211
Computer-assisted diagnosis, expert system, artificial intelligence, jaundice diagnosis, medical decision making, 189
Computer-assisted instruction, simulation, learning software, medical education, expert systems, quality criteria, 7
Computers, decision support, acute abdominal pain, 183
Computer simulation, epilepsy, temporal lobe, statistics, electroencephalography, fourier analysis, 63
Cornea modeling system, chondromalacia, keratometry, meniscal lesions, photokeratoscopy, radial keratotomy, vibration arthrography, 129
Correlation matrix, simulation, positron emis-

sion tomography, deoxyglucose, brain metabolism, 149
CO dissociation curve, mathematical model, carbon monoxide, alveolar partial pressure of CO, blood COHb level, pulmonary capillaries, 135
Critical phase hypothesis, decompression, phase models, bubbles and nucleation, meter algorithms, varying permeability model, reduced critical tensions, gradients, 237

Data base, medical informatics, computer, information, expert system, technology, 73
Decision support, acute abdominal pain, computers, 183
Decompression, phase models, bubbles and nucleation, critical phase hypothesis, meter algorithms, varying permeability model, reduced critical tensions, gradients, 237
Deoxyglucose, correlation matrix, simulation, positron emission tomography, brain metabolism, 149
Diagnosis, anamnesis, expert system, information value, laboratory test, physical examination, 203
Diagnostic program, algorithm, probability, heuristic, approximation, 29
Digitization, hybridomas, image analysis, thresholding, boundary detection, 271
Downtime evaluation, irradiation optimization, median frequency, power spectrum, tumor simulation, ventricular fibrilation, 223

ECG interference, ECG noise, knee joint model, human motion, QRS detection algorithms, 1
ECG noise, ECG interference, knee joint model, human motion, QRS detection algorithms, 1
Electroencephalography, epilepsy, temporal lobe, statistics, fourier analysis, computer simulation, 63
Electronic data interchange, standardization of messages, telecommunication, 229
Epilepsy, temporal lobe, statistics, electroencephalography, fourier analysis, computer simulation, 63
Evaluation, medical decision aid, validation, verification, expert systems, 93
Expert system, anamnesis, diagnosis, information value, laboratory test, physical examination, 203
Expert system, computer-assisted diagnosis, artificial intelligence, jaundice diagnosis, medical decision making, 189
Expert system, medical informatics, computer, information, data base, technology, 73
Expert systems, computer-assisted instruction, simulation, learning software, medical education, quality criteria, 7
Expert systems, medical decision aid, validation, verification, evaluation, 93
Expressive communication, communication aids, interface design, 53

Field potential, teaching, simulation, computer, action potential, 211
Formulas for heart weight predictions, BASIC program, percentile of heart weight, 257
Formula of probability, BASIC program, carcinoma-free probability, carcinogen DMBA, 171
Fourier analysis, biliary and pancreatic excretion, ceruletide/secretin, bilirubin, bile salts, trypsin, 109
Fourier analysis, epilepsy, temporal lobe, statistics, electroencephalography, computer simulation, 63

Gradients, decompression, phase models, bubbles and nucleation, critical phase hypothesis, meter algorithms, varying permeability model, reduced critical tensions, 237

Heuristic, algorithm, probability, approximation, diagnostic program, 29
Human motion, ECG interference, ECG noise, knee joint model, QRS detection algorithms, 1 Hybridomas, image analysis, digitization, thresholding, boundary detection, 271

Image analysis, hybridomas, digitization, thresholding, boundary detection, 271
Information, medical informatics, computer, data base, expert system, technology, 73
Information value, anamnesis, diagnosis, expert system, laboratory test, physical examination, 203
Interface design, expressive communication, communication aids, 53
Irradiation optimization, downtime evaluation, median frequency, power spectrum, tumor simulation, ventricular fibrilation, 223

Jaundice diagnosis, expert system, computer-assisted diagnosis, artificial intelligence, medical decision making, 189

Keratometry, chondromalacia, cornea modeling system, meniscal lesions, photokeratoscopy, radial keratotomy, vibration arthrography, 129

Knee joint model, ECG interference, ECG noise, human motion, QRS detection algorithms, 1

Laboratory test, anamnesis, diagnosis, expert system, information value, physical examination, 203
Learning software, computer-assisted instruction, simulation, medical education, expert systems, quality criteria, 7

Mathematical model, carbon monoxide, alveolar partial pressure of CO, CO dissociation curve, blood COHb level, pulmonary capillaries, 135
Median frequency, downtime evaluation, irradiation optimization, power spectrum, tumor simulation, ventricular fibrilation, 223
Medical decision aid, validation, verification, evaluation, expert systems, 93
Medical decision making, expert system, computer-assisted diagnosis, artificial intelligence, jaundice diagnosis, 189
Medical education, computer-assisted instruction, simulation, learning software, expert systems, quality criteria, 7
Medical informatics, computer, information, data base, expert system, technology, 73
Miniscal lesions, chondromalacia, cornea modeling system, keratometry, photokeratoscopy, radial keratotomy, vibration arthrography, 129
Meter algorithms, decompression, phase models, bubbles and nucleation, critical phase hypothesis, varying permeability model, reduced critical tensions, gradients, 237
Mitochondrial DNA, restriction fragment length polymorphism, restriction endonuclease, mutation, bacteriophage lambda DNA, pBR322 $\varphi \times$ 174cs70, SV40, 39
Mutation, restriction fragment length polymorphism, restriction endonuclease, mitochondrial DNA, bacteriophage lambda DNA, pBR322 $\varphi \times$ 174cs70, SV40, 39

pBR322 $\varphi \times$ 174cs70, restriction fragment length polymorphism, restriction endonuclease, mitochondrial DNA, mutation, bacteriophage lambda DNA, SV40, 39
Percentile of heart weight, BASIC program, formulas for heart weight predictions, 257
Phase models, decompression, bubbles and nucleation, critical phase hypothesis, meter algorithms, varying permeability model, reduced critical tensions, gradients, 237
Photokeratoscopy, chondromalacia, cornea modeling system, keratometry, meniscal lesions, radial keratotomy, vibration arthrography, 129
Physical examination, anamnesis, diagnosis, expert system, information value, laboratory test, 203
Positron emission tomography, correlation matrix, simulation, deoxyglucose, brain metabolism, 149
Power spectrum, downtime evaluation, irradiation optimization, median frequency, tumor simulation, ventricular fibrilation, 223
Probability, algorithm, heuristic, approximation, diagnostic program, 29
Pulmonary capillaries, mathematical model, carbon monoxide, alveolar partial pressure of CO, CO dissociation curve, blood COHb level, 135

QRS detection algorithms, ECG interference, ECG noise, knee joint model, human motion, 1
Quality criteria, computer-assisted instruction, simulation, learning software, medical education, expert systems, 7

Radial keratotomy, chondromalacia, cornea modeling system, keratometry, meniscal lesions, photokeratoscopy, vibration arthrography, 129
Reduced critical tensions, decompression, phase models, bubbles and nucleation, critical phase hypothesis, meter algorithms, varying permeability model, gradients, 237
Restriction endonuclease, restriction fragment length polymorphism, mitochondrial DNA, mutation, bacteriophage lambda DNA, pBR322 $\varphi \times$ 174cs70, SV40, 39
Restriction fragment length polymorphism, restriction endonuclease, mitochondrial DNA, mutation, bacteriophage lambda DNA, pBR322 $\varphi \times$ 174cs70, SV40, 39

Simulation, computer-assisted instruction, learning software, medical education, expert systems, quality criteria, 7
Simulation, correlation matrix, positron emission tomography, deoxyglucose, brain metabolism, 149
Simulation, teaching, computer, action potential, field potential, 211
Standardization of messages, electronic data interchange, telecommunication, 229
Statistics, epilepsy, temporal lobe, electroence-

phalography, fourier analysis, computer simulation, 63
SV40, restriction fragment length polymorphism, restriction endonuclease, mitochondrial DNA, mutation, bacteriophage lambda DNA, pBR322 $\varphi \times$ 174cs70, 39

Teaching, simulation, computer, action potential, field potential, 211
Technology, medical informatics, computer, information, data base, expert system, 73
Telecommunication, electronic data interchange, standardization of messages, 229
Temporal lobe, epilepsy, statistics, electroencephalography, fourier analysis, computer simulation, 63
Thresholding, hybridomas, image analysis, digitization, boundary detection, 271
Trypsin, fourier analysis, biliary and pancreatic excretion, ceruletide/secretin, bilirubin, bile salts, 109
Tumor simulation, downtime evaluation, irradiation optimization, median frequency, power spectrum, ventricular fibrilation, 223

Validation, medical decision aid, verification, evaluation, expert systems, 93
Varying permeability model, decompression, phase models, bubbles and nucleation, critical phase hypothesis, meter algorithms, reduced critical tensions, gradients, 237
Ventricular fibrilation, downtime evaluation, irradiation optimization, median frequency, power spectrum, tumor simulation, 223
Verification, medical decision aid, validation, evaluation, expert systems, 93
Vibration arthrography, chondromalacia, cornea modeling system, keratometry, meniscal lesions, photokeratoscopy, radial keratotomy, 129
